

Repeater Quick Reference

BALTIMORE REGION SKYWARN

Cover sheet for: **Spring/Summer Net Script** — the NWS-provided script text on the following page(s) is unaltered.

CURRENT REPEATERS

REPEATER	FREQUENCY	PL TONE
Primary — BARC (Towson, MD)	146 . 670	107 . 2
Backup — BRATS (PENDING)	147 . 030	156 . 7
Carroll County ARC	145 . 410	114 . 8
Carroll (Sykesville)	147 . 285	156 . 7
↳ links to Westminster	449 . 875	127 . 3
Howard County ARC	147 . 135	156 . 7
Howard County ARC (alt)	147 . 390	156 . 7

Use this table, not the frequencies printed in the script itself, as the current authoritative list. The BRATS backup repeater (147.030 / PL 156.7) is **pending permission from the BRATS trustee** — not yet confirmed for Skywarn backup use.

Note: the printed script lists "Backup Repeater: TBD" — the intended backup is BRATS, 147.030 / PL 156.7, but that use is still pending permission from the BRATS trustee. Do not read it as confirmed until updated.

BALTIMORE REGION NC SKYWARN NET CONTROL SUMMER SCRIPT (03/15/26)

Before you begin the Skywarn Net, transmit, "Is there an active Skywarn Net?" If there is no response, proceed with your net.

Primary Repeater Script: "This is _____ (call sign) Net Control for the Baltimore Region Skywarn, which includes Baltimore City, Baltimore County, Carroll County and Howard County. Skywarn is activated. Skywarn Net Control is in contact with the National Weather Service in Sterling, Virginia. All Skywarn spotters are requested to check their systems and back up systems at this time."

Primary Repeater: 146.670 with a PL of 107.2 located in Towson, MD

Backup Repeater: TBD

CCARC & CARA Repeater Script: This is _____ (call sign) Alternate Net Control for the Baltimore Region Skywarn, which includes Baltimore City, Baltimore County, Carroll County, and Howard County. Skywarn Net Control is active on the Baltimore Amateur Radio Club's repeater located in Towson, MD, on 146.67 with a PL Tone of 107.2. Net Control is in contact with the National Weather Service in Sterling, Virginia. All weather reports should be submitted to Net Control on the BARC repeater. Any stations that are not capable of contacting Net Control on the BARC repeater can relay their reports through this repeater.

(IF in WATCH mode READ EVERY 30 MINUTES)

"The National Weather Service has indicated that there is a THREAT for SEVERE WEATHER within the Baltimore region. (Read the list of watches if possible) Skywarn is in Standby mode, and amateurs may use the repeater. Please keep transmissions short with breaks to permit severe weather reports to reach Skywarn."

(IF in WARNING mode READ EVERY 15 MINUTES, BEAKING INTERMITTENTLY FOR WARNINGS AND REPORTS)

"The National Weather Service has indicated that SEVERE WEATHER IS OCCURRING in the Baltimore region. (Read the list of warnings if possible) Skywarn is currently active as a directed net."

"All amateurs are encouraged to call Skywarn with reports of severe weather. When calling Skywarn Net Control please give your Spotter ID if you have one, and indicate the exact location where severe weather is occurring. This includes city and state, nearest town, road, or intersection. Please do not use landmarks. Major roadways are OK."

"The National Weather Service is looking for reports of the following:

1. Tornadoes, funnel clouds, or rotating wall clouds
2. Hail (please give the size as compared to US coins)
3. Wind gusts in excess of 50 miles per hour measured with an anemometer.
4. Flooding of streams, creeks, or rivers out of their banks
5. Roads, or streets made impassable due to water
6. An inch or more of rain accumulation measured in rain gauge
7. Any damage by wind or lightning
8. Downed trees, large branches, or power lines"

Any station experiencing one of these severe weather events call Skywarn Net Control at this time."

Open the net to general weather check-ins. Only report events listed above to the National Weather Service.

"This is _____ (call sign), out."
